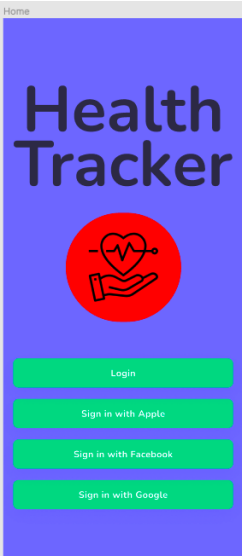
Abhash G, Segen T, Ramseii W

1. A description of how your current more developed prototype has changed/developed since Part 3 submission. Please include side by side screenshots of previous sketch to new prototype (7.5 pts)

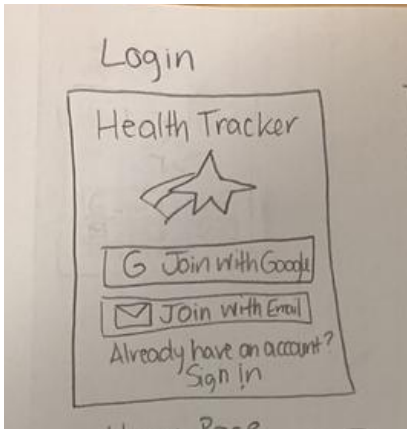
The login and home screen are separated screens now and both pages give the user the ability to either log in to an existing account or create a new account. The personal information screen was combined with the languages screen to create the account settings screen. The health information and challenges tab became one screen that essentially gives helpful information. The clinics, schedule, and reminders screen stayed the same regarding concept but have improved in terms of simplicity.

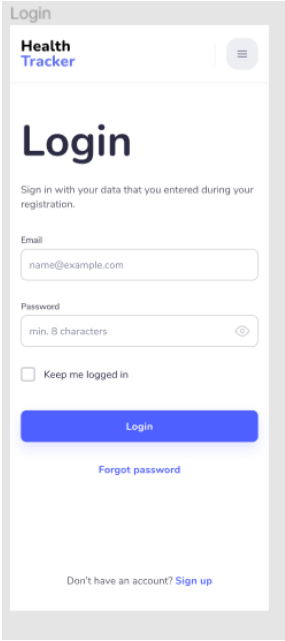
<u>Home Screen</u>



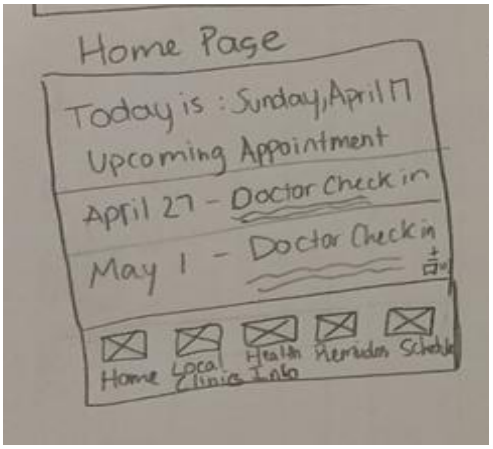
(new, therefore no previous sketch/picture)

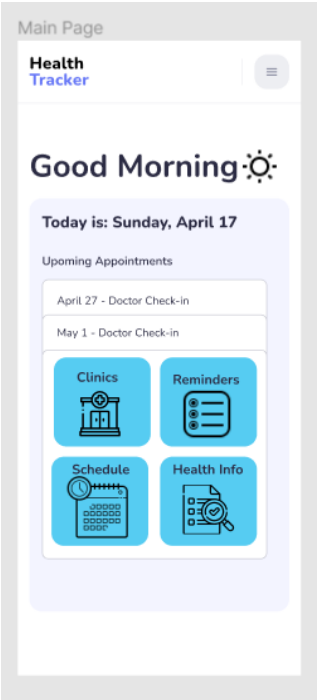
Login



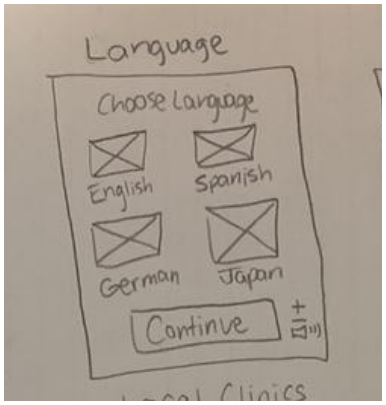


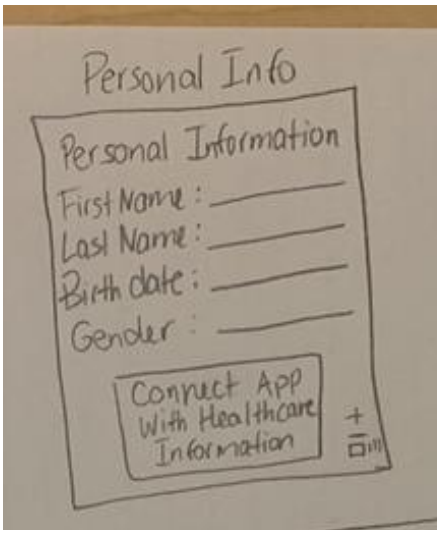
Home page/Main page

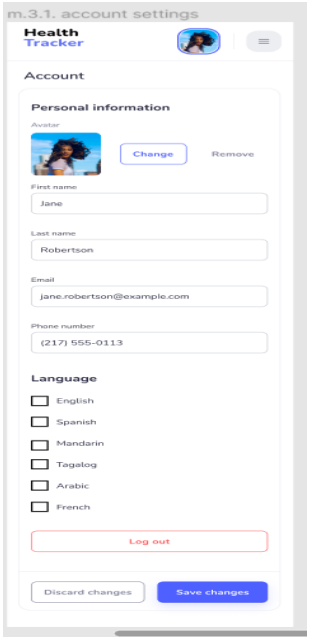




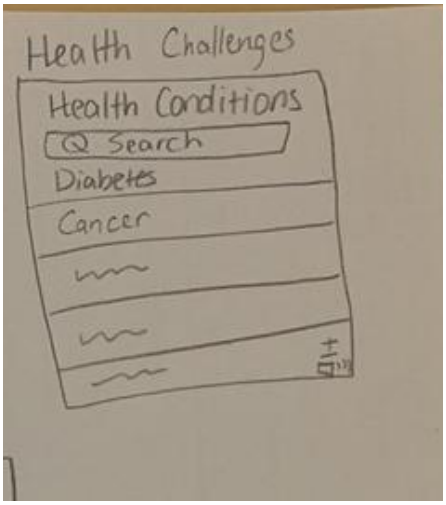
Personal Information (Language is included in account settings)

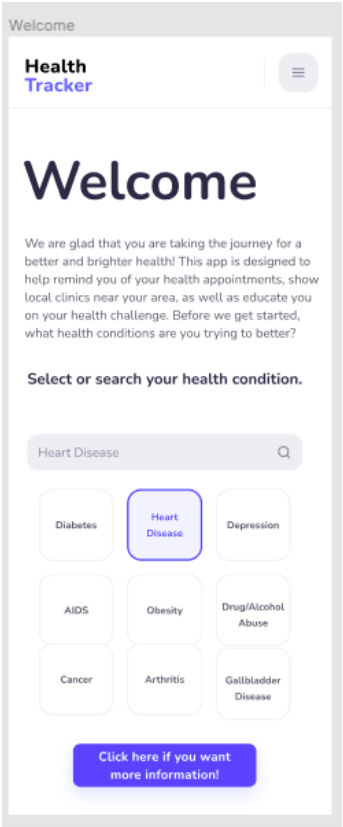




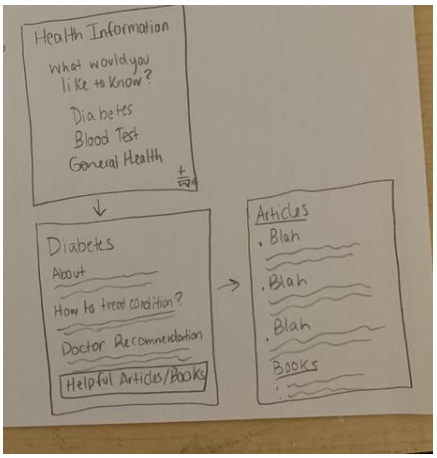


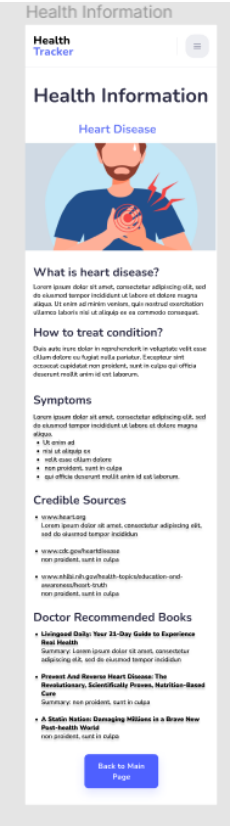
Health Challenge



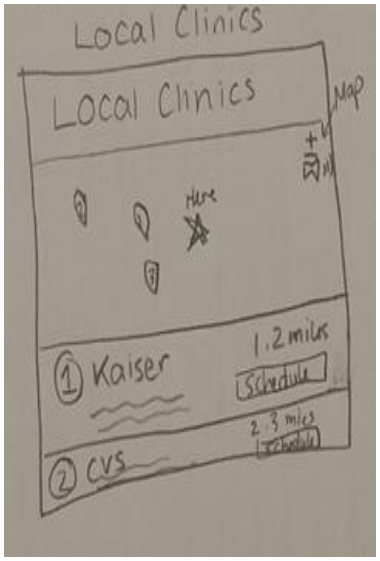


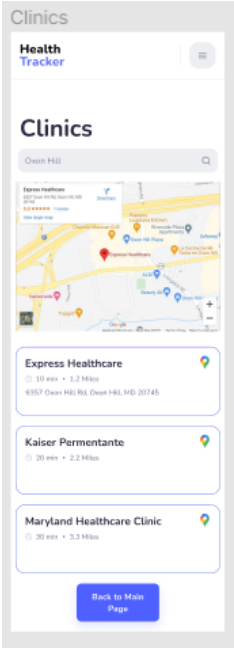
Health Information



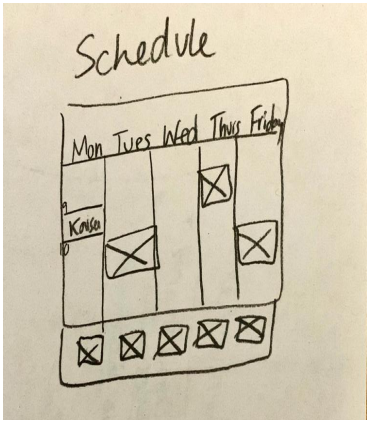


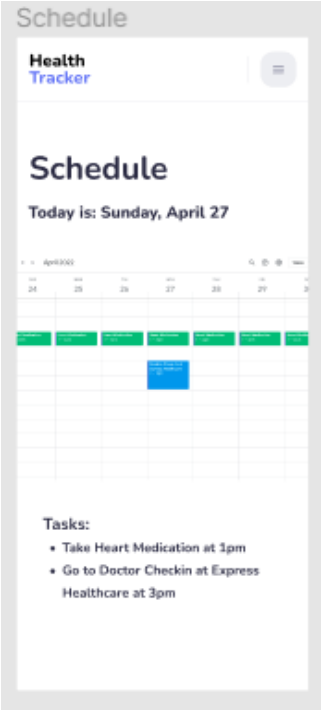
Clinics



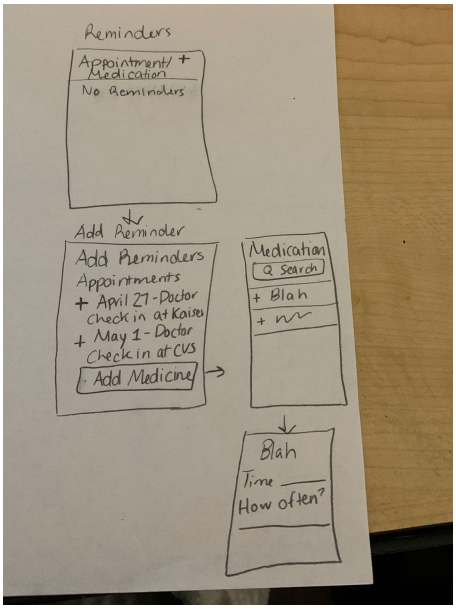


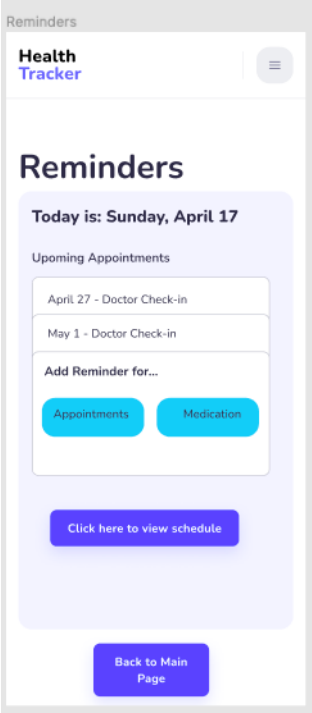
Schedule

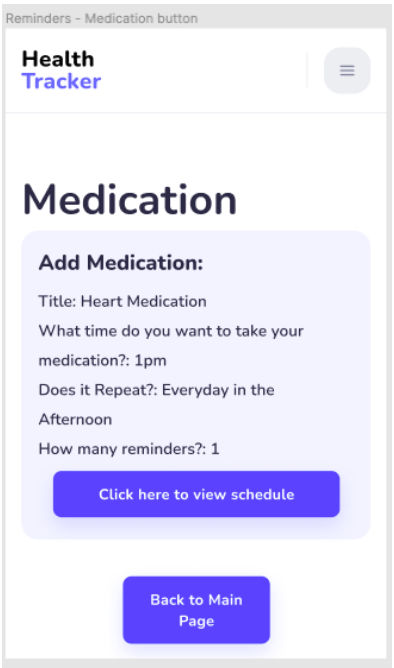


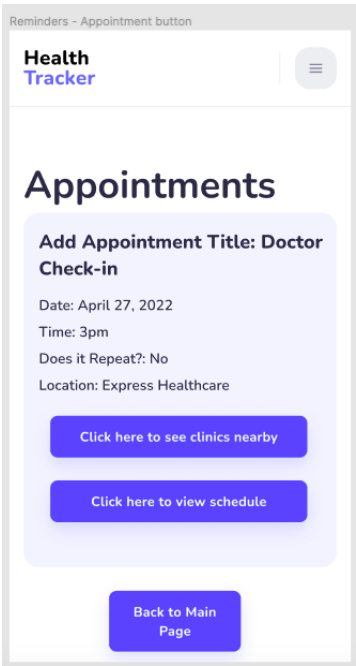


Reminders

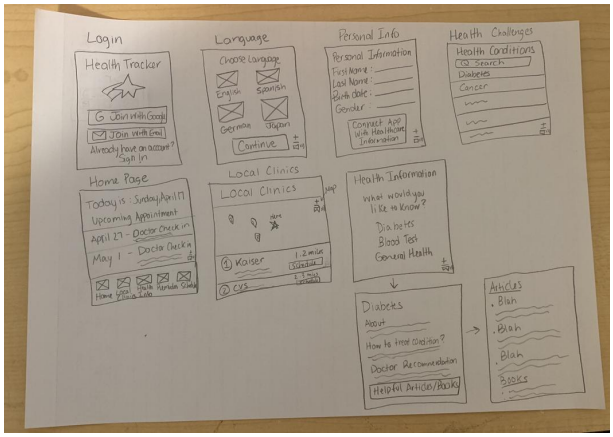


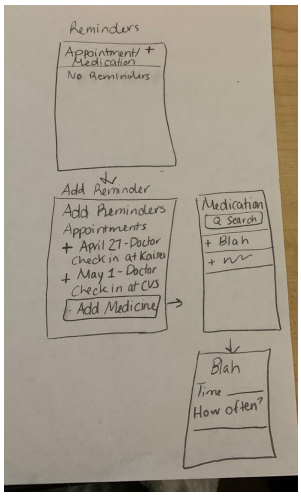


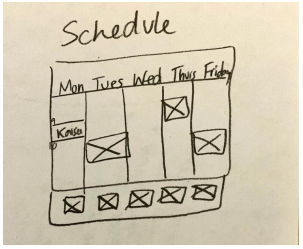


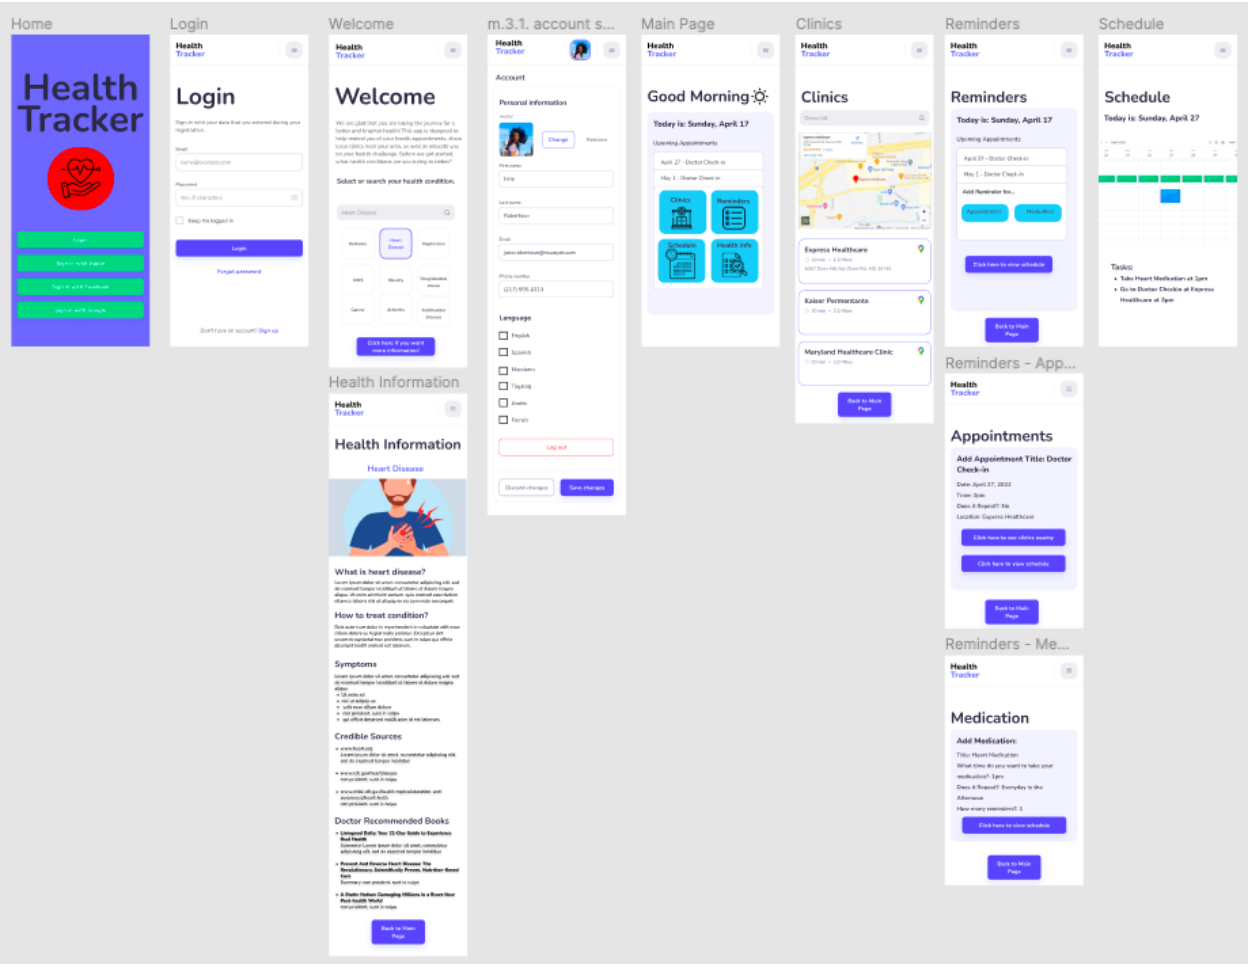


Full Prototype









2. Discuss in a few sentences what design challenges you faced if any, what informed your design and how you came up with the close to final prototype (7.5 pts)

Our design challenge we faced was coming up with designing the figma, since we were fairly new to the website we were trying to understand how to make prototypes on that website. One challenge we ran into was coming up with a design of each page. While we had to include all the information on the page that the user needed, we also had to make sure the user could navigate the page easily. We first made sure to clearly label each page and the options that were present to the user, as well as made sure the correct information was on that page. We also thought to decrease the amount of pages, and instead combine certain information on one page, that way the user could save time and would not have to wait for another page to load.
